

Chemir s.a.

CELAMINA®

Freshness feeling

ACTIVATES MICROCIRCULATION

CHEMIR S.A. presents a unique active ingredient that stimulates blood circulation and exerts a potent lymphatic drainage effect while giving the final product a feeling of freshness.

CELAMINA® causes a rising of the temperature of the treated zone. After an initial temperature drop (hypothermia) lasting for a mean of 15 minutes, temperature raises (local hyperthermia) for about 90 to 120 minutes.

CELAMINA® rapidly mobilizes waste products and repeated applications proved to be efficient in cases of tissue inflammation and cold- or fatigue-induced myalgia, as well as in products intended for microcirculation boosting.

PROPERTIES

- Stimulant of blood microcirculation
- Powerful drainage and decongestion
- Mobilization of accumulated toxins
- Formulas against cellulite
