NEOFIN® 515

The best help for the formulator

THE ULTIMATE EMULSIFIER

NEOFIN® 515 is an emulsifier characterized by its high absorption capacity. It is a great help for formulators of cosmetic and galenic products due to its great stability with the various active ingredients.

NEOFIN® 515 is a polyethylene glycol ester of saturated fatty acids with C12-C20 chains. With an average of 8 moles of ethylene oxide.

NEOFIN® 515 provides white, evanescent and highly extensible emulsions. Conveys very well the active ingredients of the emulsion.

PROPERTIES

- Excellent agent that vehicles the active ingredients of the emulsion.
- Non greasy nor sticky touch.
- Excellent dermocompatibility.
- Confers excellent absorption by the skin on emulsions.
